

MAKE FLUBBER WITH WHITE GLUE

1. Unfold your paper towel - it's like a placemat.
2. Place wax paper on the towel - it's like a plate.
3. Place an opened zip bag to the side.

I chose purple.
You can choose
no color or from
the colors listed
below.

4. A teacher will place 2 cups - 1 has diluted glue, 1 has borax-it looks and acts like water.
5. Option: Add 0 or 2 drops of food color to the borax cup.
6. Pour the borax into the diluted glue.
7. Stir with your finger for 20 seconds.
8. Pull out the flubber you've created.
9. Leftover liquid in the glue cup? That's expected because it's water that was used to dilute the glue.

choose:
purple
magenta
teal
orange

DONE? Put the flubber in the zip bag to keep it from drying out. Put the paper towel and the wax paper in the garbage can that's brought to you. Put the cups in the bin so they can be recycled.
